Technical Skills: Python, SQL, JavaScript, HTML, CSS
IT & Systems: ServiceNow, Account Management, 2FA Setup, Software Installation, Troubleshooting, System Support
Tools & Platforms: GitHub, VS Code, Android Studio, Microsoft Office, Google Workspace, Adobe Suite

Work Experience

UITS Support Center

Indianapolis, IN

IT Consultant Supervisor

Jan 2024 – Current

- Resolved 600+ technical support tickets per semester across in-person, phone, and email channels using ServiceNow
- Troubleshoot hardware, software, and account-related issues for students, faculty, and staff
- Managed user accounts, including passphrase resets and multi-factor authentication (2FA) setup
- Installed and configured software across university-managed devices
- Contributed to updating and improving Canvas training modules to enhance user onboarding and support documentation

Web Development

Indianapolis, IN

Teaching Assistant

Jan 2024 – Current

- Supported students in debugging and troubleshooting full-stack and front-end applications
- Explained core programming and system concepts, improving student understanding of technical workflows
- Led lab sessions and provided hands-on technical guidance

Projects

ContextMate

Technologies: React, Electron, SQLite, Fuse.js

- Developed a cross-platform desktop application for managing notes and code snippets using local SQLite storage
- Implemented fuzzy search functionality for fast, typo-tolerant data retrieval across large datasets
- Designed tagging and filtering systems to improve information organization and accessibility
- Built JSON import/export features for data portability and backup
- Packaged and deployed as an Electron application

Odd Job Board – Full-Stack Web Application

Technologies: Node.js, Express, SQLite

- Built and maintained RESTful APIs for managing structured job listing data
- Implemented database operations for storing and retrieving user-submitted content
- Designed a responsive interface to support user interaction and data entry
- Collaborated using GitHub for version control and issue tracking

Library Management System

Technologies: HTML, CSS, JavaScript

- Developed a system to manage book reservations, inventory, and loan tracking
- Integrated external APIs to handle real-time data interactions
- Focused on improving data organization and usability for end users
